REPORT ON HOUSEHOLD CONSUMER EXPENDITURE OF ASSAM

(26th round of National Sample Survey, July 1971 to June 1972)

1. Introduction

1.1. The data on household consumer expenditure are being collected by the Directorate of Economics and Statistics, Assam in collaboration with National Sample Survey Organisation, Govt. of India on a full matching basis since 14th round NSS (1959-59). During the 26th round NSS (1971-72) among others, consumer expenditure data were collected in order to ensure continuity of such data, covering both rural and urban areas of the State. The consumer expenditure data was based on the expenditure incurred by the sample household on domestic consumption only for a period of 30 days preceding the date of enquiry. The expenditure relating to productive enterprises of the household, was, however not taken into account. Similarly, information on consumer expenditure regarding transfer payments in kind like loan advanced, charities, gifts and other payments were not collected. Nevertheless, consumption out of transfer receipts in kind like borrowing, gifts, charities, perquisites, free collection etc. received by the sample household were duly accounted for. The total consumption was built up independently out of the following categories of consumption during the reference period (i) Consumption out of commodities purchased in cash (ii) Consumption out of commodities received in exchange of goods and services (iii) Consumption out of home-grown stock and (iv) Consumption out of transfer receipts including free collection.

1.2. The field work of the State matching sample was, as usual, carried out by the field staff of the Directorate of Economics and Statistics, Assam while the Central counterpart was managed by the Staff of the National Sample Survey Organisation, Govt. of India. The field work in respect of collection of consumer expenditure data of the 26th round NSS was divided into two parts viz. sub-round 1 which covered the period from July '71 to December '71 and sub-round 2 from January, 1972 to June 1972. The same villages/blocks bearing all serial numbers were taken up for canvassing the schedule in the sub-round 1 and the rest were conducted in the sub-round 2 of the survey. The reference period for collection of data on consumer expenditure was 30 days preceding the date of enquiry and as such the estimates presented in the report broadly related to the period from June 1971 to June 1972.

1.3. The survey was extended over the whole State of Assam covering both rural and urban areas. Altogether 344 sample households from 156 sample villages in rural areas and 337 sample households from 103 blocks in the sample urban areas were taken up for the enquiry. Originally the size of the State sample was 180 villages and 144 urban blocks of which only 156 villages and 103 urban blocks could actually be covered by the survey. The full coverage of the survey could not be achieved due to the fact that four Primary Investigators had to be surrendered to the newly created State of Meghalaya and these posts could not be filled up in time.

2. Sample design and selection of villages/blocks.

2.1 As in the previous rounds, the sampling design was a stratified two stage one. The first stage units were the villages as per 1961 census records for rural areas and blocks for urban areas and households constituted the second stage units. The entire State was divided into two regions, viz. plains and hills and within each region strata were formed by grouping contiguous Police Stations in case of rural areas, having more or less similar crop-pattern, population density, communication facilities, persons engaged in agricultural occupation etc. The State was accordingly divided into 15 strata-12 in plains and 3 in hills region. The plains region consisted of Goalpara, Kamrup, Darrang, Nowgong, Sibsagar, Lakhimpur and Cachar districts while the hills region comprised of the United Mikir and N.C. Hills Districts of the State. As for the urban areas, towns with population less than 50,000 formed stratum 1 and the remaining towns with 50,000 or more population formed stratum-2. Thus the total number of strata for Assam was only 2 for urban areas.

2.2. The list of 1961 census villages was used as sampling frame for selection of villages for this round. The villages were selected circular systematically with equal probability in the form of two independent interpenetrating sub-sample of 12 villages in each stratum. The villages with all orders of selection formed the central sample and the rest formed part of the State matching Sample. In the

case of bigger villages, each such village was further divided into a specified number of hamlet-groups (indicated in the sample list) of roughly equal population and one hamlet-group was selected at random with equal probability for the survey in order to reduce the work-load of the field staff.

2.3. All the listed households in the sample village/hamlet-groups were divided into four sub-strata on the basis of area of land operated. The households of the first sub-stratum (without any operated land) were arranged by their means of livelihood in three classes viz. (i) agricultural labourer (ii) artisan and (iii) others. The cut-off points between sub-strata 2, 3 and 4 was arrived at by roughly equalising area operated which varied from one State to another and also from one region to another within the same State. Accordingly, the following sub-strata were formed in Assam in region 1 and region 2.

- Sub-stratum-1 : household with area of land operated less than 0.005 acre (region-1 and 2)
- sub-stratum-2 : households with 0.005 acre to less than 5 acres (region 1&2)
- sub-stratum-3 : (a) households with 5 acres to less than 10 acres (region-1).
(b) households with 5 acres to less than 7.5 acres (region-2).
- sub-stratum-4 : (a) households with 10 acres and above (region-1).
(b) households with 7.5 acres and above (region-2).

For canvassing consumer household schedule 1.0, one household was selected from each of the 4 sub-strata from among the households sampled for land holding survey i.e. Sch.18(R) series, linear systematically using intervals and random starts specified for this purpose. The average number of sample households per village thus come to 4 for consumer expenditure enquiry.

2.4. There were two types of urban blocks covering the towns of Assam viz. urban frame survey blocks and 1961 census enumeration blocks which together constituted the sampling frame for urban areas of the State. Before sampling, the towns were arranged by stratum, region and district-wise and the blocks in a town were arranged by geographical continuity. In case of Assam, towns with population less than 50,000 formed stratum-1 and the remaining towns formed stratum-2. The sample blocks were selected systematically with probability proportional to size in the form of two independent interpenetrating sub-samples and the design was self-weighting at the State level.

The total sample size of all the blocks was allocated to the State in proportion to its 1961 census urban population. The allocation was modified (i) to ensure a minimum of 144 sample blocks in the State (ii) to take account of State wise variation of work-load and number of investigators and (iii) to make the allocation of blocks to the strata a multiple of 4 to facilitate having 2 sub-samples and 2 sub-rounds. Sample size for the State was allocated between strata in proportion to their total sizes. Each block was assigned a size which was a measure of its population. From each stratum allocated number of blocks were selected circular systematically with probability proportional to size in the form of two independent sub-samples. In practice, generally twice the number of allocated blocks were selected in each sub-sample and the sample blocks with odd order of selection formed the central sample and those with even order of selection, the state sample. When a selected block was found to be very large, formation of specified number of sub-blocks was allowed as in the case of hamlet-groups formation in order to reduce the work-load at listing stage. The survey was confined to one of the sub-blocks selected at random.

2.5. All households in the sample block/sub-block were arranged in four classes by self-employed and non-self-employed categories and then by land owned. The classes were as follows - land owned less than 1.00 acre and self-employed-1; land owned-1.00 acre and above and self-employed-2; land owned-1.00 acre and above but not self-employed-3; land owned less than 1.00 acres and not self-employed-4. Land owned less than 1.00 acre included landless households also. From this arranged frame on an average, 4 households were selected linear systematically, using the interval and random start specified in the sample list.

2.6. Estimation procedure- The estimates presented in the report are in general, estimates of ratios like per capita quantity or value of consumption of an item of consumption. These estimates have been arrived at by computing in each case, the estimates of 'total' of the two characteristics involved in the numerator and in the denominator of the ratio. The procedure of estimation of 'total' of a characteristic is explained below.

A - Rural Sector

Let,

- j denote - jth sample household
- i " - ith sample villages
- S " - Sth stratum.
- t " - tth sub-stratum with in a sample village.
- k " - number of strata in the state.
- ns " - number of sample villages selected in a stratum for a sub-sample
- h " - number of households selected
- y " - value of the characteristic.
- M_{st} " - constant multiplier for 1 to sth stratum and tth sub-stratum.

Then, the estimate Y of the State total of the characteristic built up from one sub-sample is given by,

$$Y = \sum_{t=1}^4 \sum_{s=1}^k M_{st} \sum_{i=1}^{ns} \sum_{j=1}^{h_{sit}} Y_{sitj}$$

The combined sample estimate of "total" is, then obtained by taking a simple arithmetic average of the two sub-sample estimates of 'total'.

B - Urban Sector

The estimates presented for the urban sector are similar to these of the rural sector. The estimate of the 'total' of a characteristic for the urban sector is, however, obtained as follows,

Let,

- j denote - jth sample household.
- i " - ith sample block.
- s " - sth stratum.
- k " - number of strata in the state.
- h " - number of households selected.
- ns " - number of sample block selected in a stratum for a sub-sample
- y " - value of the characteristic.
- M " - Constant multiplier for the state.

then the estimate Y of the "total" of a characteristic for the State built up from one sub-sample is given by,

$$Y = M \sum_{s=1}^K \sum_{i=1}^{ns} \sum_{j=1}^{h_{si}} Y_{sij}$$

The combined estimates for aggregates and ratio are obtained in the same manner as described for the rural sector.

N.B. :- In order to retain the self-weighting nature of the design, the cases of casualty villages, blocks and households and the contribution of factor "G" is taken care of by adjusting the multipliers as per procedure prescribed. The adjustments are made separately for each sub-sample and at the region level in the rural sector and at the State level in the urban sector.

3. Concepts and Definitions.

3.1 The important concepts and definitions followed in the consumer expenditure enquiry are as follows.

3.2 Household - A group of persons normally living together and taking food from a common kitchen constitute a household.

3.3 Household size - The number of normally resident members of a household is its size. If a person lives in one place and takes food at another place, he is considered a normal member at the place where he lives. The actual composition of a household is decided by the head of the household. However, the following rules are followed in some special situations.

(i) The inmates (including staff) of a mess, hostel, boarding and lodging house, hotel, orphanage, vagrant house etc. are treated as single member households. If, however, a group of such persons who normally pool their income and spend from such a common pool, such a group forms a separate household by itself.

(ii) Inmates of Jails, hospitals, nursing home etc. are excluded but residential staff therein are included.

(iii) Floating population i.e. persons without any normal residence, vagrants etc. are also excluded.

3.4. Household land possess - Land possessed by a household includes all land owned, plus land leased in minus land leased out by the household as on 30.6.71. For a plot of land under joint possession, only the share of the sample household is taken as land possessed by the household.

3.5. Household industry occupation - The nature of economic activity carried out in an establishment, undertaking or service in which gainful work is pursued is denoted by industry while occupation is the trade, profession or type of work performed by a person irrespective of the branch of economic activity to which he is attached. To determine the household industry occupation the general principle is to list out all the gainful occupations during the year preceeding the date of survey by the members of the households, no matter whether such occupations is pursued by a member of the household as his principal or subsidiary occupation. Out of these occupations that one which fetched the maximum earnings to the household in the year is considered as household occupation. It is quite possible that the household occupation thus determined may be pursued in different industries by one or more members of the household. In such cases, the particular industry which fetched the maximum earning out of all the different industries corresponding to that particular occupation is considered for recording household industry. The household industry occupation is recorded in six-digit code number as per standard industry occupation classification. The first three left hand digits refer to the industry and the next three digits refer to occupation code of the household.

3.6. Household consumer expenditure - Data relating to consumer expenditure comprises all expenditure incurred by the household during the reference period (30 days preceeding the date of survey) exclusively for non productive purposes. Thus all expenses towards the enterprise activities of the household are excluded which have got no relevance. The expenditure incurred on the purchase and maintenance of pet animals which are meant for domestic use only are recorded but the consumption by the livestock of the household is excluded as it is considered as an enterprise. The concept of consumption is not uniformly adopted for all items in the schedule. For items belonging to the categories - food, intoxicants and fuel and light (blocks-5 and 6), consumption implies actual amount consumed irrespective of the amount purchased in cash or kind during the reference period. For items in the block-7 (clothing and footwear) consumption meant maiden use during the reference period. It may, however, be noted that consumption out of transfer receipts in kind like loans, gifts, charities, free collection etc. is included in the household consumption while transfer payments in kind like loans (advanced or repaid), gifts, charities etc. are excluded from the scope of household consumption. Consumption of goods purchased in cash is the actual purchase price irrespective of the period of purchase, that of goods produced by the household, at the ex-farm or ex-factory price and that of goods received by barter exchange or transfer receipts, at the average retail price prevailing in the locality of the sample household during the reference period. In case of items under miscellaneous goods and services and durable goods (block 8 & 9) there is

no separate concept of purchase and consumption as in the case of items listed under the blocks 5 to 7. The expenditure incurred in cash or kind on an item of consumption during the reference period towards its purchase, construction, maintenance, repair or use for non-productive purposes is considered to be the consumer expenditure on that item. Capital expenditure like purchase of land and building or construction of building for residential purposes are excluded while that of expenditure on repair and maintenance of residential house is accounted for. For these blocks only first hand purchase is considered.

4. Explanatory Notes on Tables.

4.1 All together ten different tables are generated separately for rural and urban areas of the State and presented in this report. The estimates given in the tables are based on combined results of the state matching sample i.e. (sub-samples 1 and 2) only, as the central sample results are not made available for pooling of the results of State and Central Sample. These are as follows.

1. Distribution of sample households by monthly per capita expenditure classes.
2. Estimated number of households (in percentage) by monthly per capita expenditure classes.
3. Estimated number of adult males, adult females and children (in percentage) by monthly per capita expenditure classes.
4. Average number of adult males, adult females and children per household by monthly per capita expenditure classes.
5. Consumer expenditure (Rs.0.00) per person for a period of 30 days on broad groups of items by monthly per capita expenditure classes.
6. Consumer expenditure on broad groups of items as percentage to total consumer expenditure by monthly per capita expenditure classes.
7. Value (Rs.0.00) and quantity (0.00 kg.) of cash purchase per person for a period of 30 days by cereal items and by monthly per capita expenditure classes.
8. Value (Rs.0.00) of consumption of selected items per person for a period of 30 days by monthly per capita expenditure classes.
9. Quantity (0.00 standard unit) of consumption of selected items per person for a period of 30 days by monthly per capita expenditure classes.
10. Estimated number of households reporting consumption of an item per 100 estimated number of households under each monthly per capita expenditure classes.

4.2 The items of consumption have been broadly grouped into 21 under two major groups - food and non-food and their totals. The constituents of individual group are as follows.

1. Cereals - rice and its products, wheat, jowar, bajra, maize, ragi, barley and small millets.
2. Gram - gram and its products.
3. Cereal - tapioca, pea, sweet potato, manna, jack-fruit, seed etc. which substitute are often used to replace the consumption of cereals.
4. Pulses - arhar, gram (split grain) moong, masur, urd, khesari, pea, soyabean, other pulses and their products.
5. Milk and milk products - milk (liquid), baby food (milk), milk (condensed, powder etc.) ghee, butter, curd & other milk products.
6. Edible oil - Vanaspathi, mustard oil, coconut oil, gingelly oil, groundnut oil, linseed oil, edible oil (others) and oilseeds.
7. Meat, egg and fish - goat meat, mutton, beef, pork, buffalo meat, other meat poultry, other birds, egg, fish (dry and fresh).
8. Vegetable - Potato, onion, tomato, brinjal, cabbage, cauliflower, root vegetables, leafy vegetables and other vegetables.
9. Fruits & nuts - fresh fruits, like banana, orange, mango etc. and dry fruits and nuts like coconut, groundnuts etc.
10. Sugar - Sugar, gur, khandasari sugar etc.

11. Salt - Sea salt, rock and ether salt.
12. Spices - Turmeric, black pepper, dry chillies, green chillies, garlic and other spices etc.
13. Beverages, refreshments etc - tea, coffee, drinking beverages other (specify) biscuits, bread, prepared sweets, cooked meals, pickles, sauce, jam, jallies, processed food others etc.
14. Pan, tobacco and intoxicants - Pan, (leaf, finished), superi, biri, cigarettes, leaf tobacco, hookah tobacco, snuff, zardah, opium, ganja, country liquor, foreign liquor etc.
15. Fuel and Light - Coke, coal, fire wood, electricity, gas, dungcakes, charcoal, kerosine, candle, matches and other fuel and lighting oil.
16. Clothing - all items of clothing - cotton, silk, rayon etc. and woollen including items of bedding and upholstery.
17. Footwear - leather sandal, chappels, leather boot, shoe, other leather foot-wears and other footwear.
18. Miscellaneous goods and services - cinema, theatre, mela, fair, sports, amusements, books, newspaper, journals, educational expenses, medicine, toilet articles, sundry articles, consumer services, conveyance etc.
19. Rents - house rent, garage rent, residential land rent and other consumer rent.
20. Taxes - Consumer taxes and cesses like licence fees for gun, radio, motor car, municipal taxes etc.
21. Durable goods - Durable goods and semi-durable goods and their repairing expenses including maintenance of residential houses i.e. items like furnitures, musical instruments, ornaments, utensils, clock, electric fan, heater, stove, pressure cooker, sewing machine, type writer, perambulator, bicycle, motor cycle, motor car, tube, tyres other durable goods and equipments.

4.3. The monthly per capita expenditure classes by which the table are prepared are as follows :-

<u>Sl.No.</u>	<u>Monthly per capita expenditure classes in Rs.</u>			<u>Sl.No.</u>	<u>monthly per capita expenditure classes in Rs.</u>		
1.	0.00	-	7.99	6.	18.00	-	20.99
2.	8.00	-	10.99	7.	21.00	-	23.99
3.	11.00	-	12.99	8.	24.00	-	27.99
4.	13.00	-	14.99	9.	28.00	-	33.99
5.	15.00	-	17.99	10.	34.00	-	42.99
				11.	43.00	-	54.99
				12.	55.00	-	74.99
				13.	75	and above	

The group 0.00 - 7.99, 8.00 - 10.99 etc. stands for 0 - less than 8, 8 - less than 11 and so on. Estimates for all classes pooled together are also presented in the tables.

5. Summary results.

5.1 The detailed estimates are given in the tables appended herewith. Some of the important findings of the survey are briefly presented in this section.

5.2 Household size - The following tables gives the distribution of household size by monthly per capita expenditure classes in respect of both rural and urban areas of the State.

Table - 1.

Average household size by monthly per capita expenditure classes (Rural & Urban)

Monthly per capita expenditure classes (in Rs.)	Average household size	
	Rural	Urban
1	2	3
0.00 - 14.99	-	-
15.00- 17.99	9.30	1.00
18.00- 20.99	10.50	-
21.00- 23.99	7.57	9.00
24.00- 27.99	8.28	9.00
28.00- 33.99	7.43	7.12
34.00- 42.99	6.71	6.71
43.00- 54.99	6.74	6.73
55.00- 74.99	3.98	5.22
75 and above	2.62	3.01
All Classes	6.30	4.92

It may be observed from table I above that the average household size obtained from the survey is 6.30 for the rural and 4.92 for the urban in respect of all expenditure classes combined together. As against this, the household size of the rural and urban population of Assam according to 1971 census is 6.02 and 5.51 respectively. The highest household size 10.50 is reported in the expenditure class Rs.18-21, followed by 9.30 in the class Rs.15-18 and 8.28 in the class Rs.24-28 for the rural sector. Whereas the highest household sizes 9.00 is recorded both in the expenditure classes, Rs.21-24 and Rs.24-28 for the urban sector. It is further revealed that the trend of household sizes is more or less uniform for rural and urban sectors in the expenditure classes Rs.23-34, Rs.34-43, and Rs.43-55. In general the average household size tends to decrease with the rise in expenditure levels. This is as much true for the rural sector as for the urban sector, save and except for the expenditure classes Rs.15-18, Rs.18-21 and Rs.21-24 in rural sector and Rs.15-18 in urban sector where the trend is found to be erratic.

5.4. The distribution of estimated number of population by per capita expenditure classes, both for rural and urban can be seen in the table given below.

Table - 2.

Percentage distribution of population according to monthly per capita expenditure classes (Rural and Urban)

Monthly per capita expenditure classes in Rs.	Rural		Urban	
	Percent	Cummulative per cent	Percent	Cummulative percent
1	2	3	4	5
0.00 - 14.99	-	-	-	-
15.00 - 17.99	2.05	-	0.05	-
18.00 - 20.99	0.13	2.18	-	0.05
21.00 - 23.99	3.17	5.35	0.48	0.53
24.00 - 27.99	3.70	14.05	1.46	1.99
28.00 - 33.99	19.05	33.10	6.22	8.21
34.00 - 42.99	33.00	66.10	18.39	26.60
43.00 - 54.99	21.50	87.60	23.53	50.13
55.00 - 74.99	9.34	96.94	25.58	75.71
75.00 and above	3.06	100.00	24.29	100.00
All Classes	100.00	-	100.00	-

5.5 It has been observed in table 2 that the distribution of population in the different expenditure classes for rural and urban sectors is quite different. There are no persons recorded in the first four expenditure classes. The survey further reveals that 2.18 percent of the rural population are in the monthly per capita expenditure class of less than Rs.21.00, 11.37 percent between Rs.21.00 - Rs.27.99 while 72.55 percent between Rs.28.00 - Rs.54.99. The percentage between the monthly per capita expenditure class Rs.55 - Rs.74.99 is 9.34% and 3.06 per cent Rs.75.00 above. The population of population is highest in the expenditure classes Rs.34-42.99. Another striking feature is that only 0.53 per cent of urban population falls in the monthly expenditure group of less than Rs.24.00 per head per month, and 7.68 per cent between Rs.24.00 - Rs.33.99. The bulk of the urban population is, however, found in the last four higher expenditure classes. More than 91 per cent of the urban population is within the monthly per capita expenditure classes Rs.34.00 - Rs.75.00 and above of which precisely 67.50 per cent falls in the monthly per capita expenditure group between Rs.34.00 - Rs.74.99 and the remaining 24.29 percent belongs to the highest expenditure class i.e. Rs.75 and more. In other words, about half the urban population belongs to the expenditure classes Rs.55 to Rs.75 and above. As against this only 3.37 per cent of rural population falls under the highest expenditure class viz. Rs.75 and more and 12.40 per cent between Rs.55 - Rs.74 and above.

5.6 The distribution of estimated number of population and consumer expenditure by monthly per capita expenditure groups is given below in table 3.

TABLE 3.

Percentage distribution of population and consumer expenditure according to monthly per capita expenditure groups (Rural and Urban)

Monthly per capita expenditure groups (in Rs.)	Rural				Urban			
	Population		Expenditure		Population		Expenditure	
	Percent	Cumulative Percent	Percent	Cumulative Percent	Percent	Cumulative Percent	Percent	Cumulative Percent
0.00 - 14.99	nil	nil	nil	nil	nil	nil	nil	nil
15.00 - 23.99	5.35	5.35	2.18	2.18	0.53	0.53	0.18	0.18
24.00 - 33.99	21.72	27.07	20.81	23.00	19.34	20.00	3.07	3.25
34.00 - 42.99	34.32	61.39	31.23	54.23	49.49	69.49	11.29	15.14
43.00 - 54.99	21.40	82.79	24.15	78.38	22.33	91.82	18.17	33.3
55.00 - 74.99	9.34	92.13	13.94	92.32	23.44	100.00	24.81	58.12
75.00 & above	3.06	100.00	7.65	100.00	24.29	100.00	41.04	100.00
Total	100.00		100.00		100.00		100.00	

5.7. It is pertinent to note from the table above that neither the population nor any expenditure is reported under the expenditure groups Rs.0.00 - Rs.14.99. The distribution of population and consumer expenditure in the different expenditure groups both for rural and urban areas shows a divergent trend. The survey reveals that in the monthly per capita expenditure group between Rs.15.00 - Rs.42.99 66 per cent of rural population spends more than half of the total consumer expenditure (54%) as against only 27 per cent and 14% respectively in the urban areas. The survey further reveals that in the per capita monthly expenditure group Rs.15.00 - Rs.33.99 only about 2 per cent of urban population spends 1 per cent of consumer expenditure while in the rural areas the respective percentages are 33 per cent and 23 per cent. It is seen that in the last two expenditure groups taken together, roughly 50 per cent of urban population spends 27 per cent of consumer expenditure whereas the per cent of rural population is only 14% and 22% respectively. Only 3 per cent of rural population spends about 3 per cent of expenditure as against 24 per cent of urban population with an average monthly per capita expenditure of more than 41 per cent in the highest group viz. Rs.75.00 and above. It will be observed that the bulk of the rural population is, however, clustered in the expenditure groups Rs.24.00 - Rs.54.99 while in the case of urban population the concentration is noticed mainly in the last three groups viz. Rs.43.00 - Rs.75.00 and above.

5.8. Pattern of consumer expenditure - The following table shows the broad pattern of item wise consumer expenditure in the rural and urban areas of Assam as revealed by the survey.

Table - 4.

Per Capita consumer expenditure per month (in Rs.)				
I t e m	R u r a l		U r b a n	
	Expenditure (in Rs.)	Percent	Expenditure (in Rs.)	Percent
1	2	3	4	5
1. Foodgrains	18.67	45.47	19.08	30.04
2. Milk & milk product.	1.86	4.53	3.50	5.51
3. Other food items.	10.58	25.77	18.76	29.53
Total food items	31.11	75.77	41.34	65.08
4. Fuel and lighting	2.97	7.23	3.94	6.20
5. Clothing	1.67	4.07	3.55	5.59
6. Other non-food items.	5.31	12.93	14.69	23.13
Total non-food items	9.95	24.23	22.18	34.92
T O T A L	41.06	100.00	63.52	100.00

5.9. There has been a spectacular rise of prices of almost all the commodities in the past decade and this has been reflected by and large in the consumer expenditure data thrown up by the 26th round NSS. The survey reveals that the per capita consumer expenditure works out at Rs.41.06 for rural areas and Rs.63.52 for the Urban areas as against Rs.28.19 and Rs.40.22 respectively during the 20th round NSS(1965-66 State Sample) , the per cent increase during the intervening period being 45.6 and 57.9. It may, however, be noted that the consumer price index number of the working class(urban) of Assam has registered a sharp rise of 56.2% over the period of six years from 1965-66 to 1971-72, the percent increase of consumer expenditure during the said period being 57.9 in the urban areas of Assam. Similarly in respect of rural population (plains districts) the price index went up to the extent of 44.5% as against 45.6% rise in the consumer expenditure during the period mentioned above. Further , the provisional estimates of the 25th round NSS (1970-71, State Sample) shows that the per capita consumption expenditure is Rs.40.44 in the rural areas and Rs.58.11 in the urban areas. However, during the period of one year from 25th round NSS to 26th round NSS there is only 1.5% overall rise in consumer expenditure in rural areas whereas the rise in urban areas is more pronounced which comes to 9.3% . The proportion of expenditure on food items (75-77%) is much higher in case of rural areas as compared to urban areas (65.08%) whereas it is quite opposite in the case of non-food items. It appears from the detailed item-wise tables on expenditure that the pattern of consumer expenditure differs considerably in rural and urban areas of the State. Major share of the expenditure under food goes to cereals item (41.99%) for rural areas while for urban it is very much less (26.16%). In contrast, the proportion of expenditure on food items like pulses, milk and milk product, edible oil, fruits and nuts and beverage and refreshment etc. is higher for urban areas in comparison to rural areas. Similarly, for non-food items, the proportion of expenditure (34.99%) is significantly higher for urban areas than the rural areas (24.23%) mainly due to higher level of expenditure on non-food items like clothing, miscellaneous goods and services, rent and taxes in urban areas.

5.10. On a cursory view of table 5 below (percentage to total consumer expenditure by broad groups of items of consumption and by monthly per capita expenditure classes) it may be observed that the expenditure on food items decreases with increased level of expenditure classes while it is reverse in the case of non-food items. This holds good generally both for rural and urban areas of the State except in the first reporting expenditure classes of the former category and 1st reporting class of the later category where the trend does not seem to be consistent. To be more specific it can be said that for food items the percentage of expenditure in rural areas is 81.75 in the expenditure class Rs.24-28 which decreases to 78.57 per cent in the next higher expenditure class Rs.28-34 and then to 77.67 per cent in the next expenditure class Rs.34-43 and so on. The per cent in the highest expenditure class, Rs.75 and above comes to 66.35 only. On the other hand the per cent of expenditure on non-food items in rural areas is 18.25 in the expenditure class Rs.24-28 which increases to 21.43 per cent in the next expenditure class, Rs.28-34 and it shows further increase to 22.33 per cent in the next higher expenditure class, Rs.34-43 and so on and the highest per cent expenditure, 33.65 is recorded in the ultimate expenditure class viz. Rs.75 and above. Similar trend is manifested, in respect of food and non-food items in urban areas with increased level of expenditure classes from Rs.21-24 to Rs.75 and above.

Table -5.

Percentage to total consumer expenditure by broad group of items and by monthly per capita expenditure classes (Rural and Urban)

Per capita expenditure classes in Rs.	Rural		Urban	
	Food	Non-food	Food	Non-food.

5.11. The value and quantity of cash purchase per person for a period of 30 days by important cereal items in respect of rural and urban areas of the State are shown below.

Table - 6.

Value (Rs.0.00) and Quantity(0.00 Kg.) of cash purchase per person for a period of 30 days by important cereals items(Rural and Urban).

Items	Rural		Urban	
	Value	Quantity	Value	Quantity
1	2	3	4	5
Rice and its products	5.29	4.33	14.00	10.59
Wheat and its products.	0.68	0.57	1.65	1.40
Total cereals (including gram and its products and cereals substitution).	5.98	4.91	14.76	12.05

5.12. The value and quantity of total cereals purchased during the reference period per person are worked out at Rs.5.98 and 4.91 kg. only in rural areas whereas the same in urban areas it comes to Rs.14.76 and 12.05 kg. respectively. The survey further reveals that the major items purchased is rice and its products followed by wheat and its products both in the rural and urban areas. It may, however, be pointed out that the quantity purchased during the reference period may either be consumed by the household wholly or partly or not consumed at all and as such it will not give any indication on consumption pattern out of cash purchase. Obviously, the quantity purchased includes purchase for gifts, charities etc. except for enterprise purposes of the household during 30 days preceding the date of survey.

5.13. The information relating to value and quantity of consumption of some important items per person for 30 days has been summarised in table 7 below, separately for rural and urban areas of the State. In evaluating the value and quantity, the main criterion is the quantity of consumption by the household during the reference period whether in cash or kind or home grown products. It also includes transfer receipts.

Table - 7

Value and quantity of consumption of some important items together with their percentages to total expenditure per person for a period of 30 days in rural and urban areas of the State.

Items	Rural				Urban			
	Value (in Rs.)	P.C. to total consumer expenditure.	Quantity (in standard unit)	P.C. to total cereals	Value (in Rs.)	P.C. to total consumer expenditure.	Quantity (in standard unit)	P.C. to total cereals

Total Consumer expenditure	41.06	100.00	-	-	63.52	100.00	-	-

5.14 It has been observed from the table above that there is a wide variation in the rate of consumption of items in the rural and urban areas of Assam. The quantity of cereals consumed per person per month is 13.92 kg. in rural areas while it comes to 12.70 kg. only for the urban areas. Among cereals, rice is the major items of cereal consumed by either category of people, followed next by wheat and its product. In terms of percentage to total cereals, the consumption of rice is 94.9% in rural areas as against 88.9% in urban area. On the other hand percentage of consumption of wheat is higher in urban areas (10.9%) compared to rural counterpart (4.9%). The survey further reveals, that the consumption rate of milk (liquid), vanaspati, mustard oil, meat, sugar and kerosine is higher in urban areas, whereas the quantity of consumption in respect of fish (fresh) gur is comparatively low. The consumption of electricity is very negligible in rural areas of the State.

5.15. The value of consumption of cereals per persons for 30 days comes to Rs.17.24 for rural areas and Rs.16.62 for urban areas, the percentage to total consumer expenditure being 41.99% and 26.16% respectively. It is apparently seen that major part of consumer expenditure on cereals is, however, spent on rice and wheat. In rural areas about 40% of total expenditure is spent on rice and 1.5% on wheat. The corresponding percentages for the urban areas are about 24% on rice and 2.6% on wheat. The value of consumption of almost all the items like pulses, vanaspati, mustard oil, meat, sugar, kerosine, electricity, readymade garments, education, medicine and amusements per person per 30 days is conspicuously high in urban areas in comparison to rural areas save and except gur. It has to be borne in mind that there is wide consumption of Gur in rural areas of Assam. However, the proportion of expenditure to total consumer expenditure is higher in urban areas for majority of items, except mustard oil, fish (fresh), gur, kerosine and medicine where the per cent of expenditure in rural areas is more.

5.16. The estimated number of households reporting consumption of some of the important items per 100 estimated number of households are given below in table-8 as an excerpt from detailed table. The details of household reporting item-wise consumption separately for rural and urban areas in items of per 100 estimated households under different per capita expenditure classes will be available in table 10.1 and 10.2.

Table - 8.

Estimated number of households reporting consumption of an item per 100 estimated number of households (Rural and Urban).

I t e m s	R u r a l	U r b a n
	2	3
1. Rice and its products	93.16	92.32
2. Wheat and its products	33.62	70.45
3. Pulses	98.76	99.45
4. Milk (liquid)	68.20	62.29
5. Ghee	1.21	5.61
6. Vanaspati	4.45	25.13
7. Mustard oil	97.49	96.08
8. Meat (goat)	27.93	91.17
9. Egg	19.25	34.15
10. Fish (Fresh)	92.96	76.55
11. Fish (dry)	10.57	2.72
12. Potato	88.03	98.38
13. Sugar	72.67	98.11
14. Gur	68.15	18.60
15. Tea (leaf)	87.25	92.56
16. Superi (betelnut)	77.85	55.59
17. Tobacco	93.06	78.22
18. Intoxicant	16.08	2.50
19. Kerosine	98.22	88.25
20. Electricity	0.42	13.41
21. Amusement	18.80	54.59
22. Education	20.24	42.38
23. Medicine	20.10	26.09
24. Consumer services	68.56	79.19
25. House rent etc.	1.98	42.13

5.17. On a critical observation of the table above it will be seen that by and large the number of households reporting consumption per 100 estimated household on wheat, pulses, mustard oil, ghee, vanaspathi, meat (goat), egg, potato, sugar, tea(leaf), electricity, amusement, education, medicine, consumer services and house-rent etc. is high in urban areas as compared to rural areas of the State while it is quite reverse in the case of consumption of items like rice, milk(liquid), fish (fresh & dry), gur, supari(betelnut), tobacco, intoxicants and kerosine. The proportion of households reporting consumption of electricity and house-rent etc. is quite negligible in rural areas i.e. only 0.42 and 1.98 per 100 households respectively. On the otherhand of households reporting consumption of fish(dry), gur, supari(betelnut) and intoxicants are fairly high in rural areas as against urban areas.
